Employment Timeline

Principal Engineer at Aegon Life Insurance Company (ALIC)
Feb 2019 - Dec 2020

As a Principal engineer, I architected and built a cloud native policy administration solution on AWS with lot of agility in a startup like environment. Below are some of the highlights:

- Led multiple teams of software engineers from ALIC and Saksoft (one of our consulting partners).
- Designed and built the event-driven cloud native platform from scratch (using SpringBoot 2.X and Spring cloud AWS) which addressed cross-cutting concerns like monitoring, observability, resilience, distributed caching etc.
- Designed and built a multi-tenant policy administration system with B2B insurance sales, which allowed onboarding of e-commerce platforms like PayTM, MobiKwik, Flipkart etc.
- Built various patterns around the business process engine (Camunda) for asynchronous execution which became a Solution Building Block.
- Contributed across platform, services and experience layer of the architecture and solution.
- Initiated and facilitated Architecture and Design Review Board.
- Collaborated with the Aegon Europe team on designing and building Knowledge Management System and Conversational engine (Chatbot).
- Collaborated with ThoughtWorks (used to be our consulting partner) to improve our engineering practices, processes and customer experience.
